

# CANPRO

CAN FILLING SYSTEMS

- Based on European design
- Cam down filling valves
- CO2 purging
- Siemens PLC & HMI
- Undercover gassing
- Bubble breaker
- German made chucks and rollers
- Stainless steel base frame
- Auto lube system

MODEL - CPH	330ML	500ML
9/2:	5,500	4,000
20/4:	12,000	9,000
30/6:	18,000	15,000
60/8:	36,000	30,000
108/12:	72,000	-

## FEATURING:

- Designed specifically for the growing craft brewery industry by delivering a wide range of canning options and flexibility at a best-in-class value
- Very low Dissolved Oxygen pickup (< 30ppb) is achieved with CO2 pre-purge technology from an independent CO2 channel, and tangential can transfer with under-cover gassing
- Precise vent-tube fill height control system with true counter-pressure-gravity filling technology for high-speed operation and superior product yield
- Rotary filler and seamer design on a common-base with a tangential discharge, ensures perfect synchronization, high-speed operation, and reliable mechanical maintainability
- Variable speed operation to meet production requirements and maintain high efficiency
- Quick & easy adjustable Filler-Seamer height adjustment for different size containers (i.e. 330ml & 375ml.)
- Locally sourced parts, service & support
